8 Contributing Agencies: National Aeronautics and Space Administration (NASA)  
9

10  
11 **1. Description of Topic, Audience, Intended Use, and Questions to be Addressed**  
12

13 *1.1. Introduction*  
14

15 This prospectus has been prepared according to the *Guidelines for Producing Climate Change Science*  
16 *Program (CCSP) Synthesis and Assessment Products*. The prospectus will be reviewed and approved by  
17 the CCSP Interagency Committee. The document describes the focus of this Synthesis and Assessment  
18 Product and the process that will produce it. The document does not express any regulatory policies of the  
19 United States or any of its agencies, or make any findings of fact that could serve as predicates for  
20 regulatory action.  
21

22 The Atmospheric Composition chapter of the CCSP Strategic Plan describes a vision to produce a  
23 Synthesis and Assessment Product (SAP) on “Trends in emissions of ozone-depleting substances, ozone  
24 layer recovery, and implications for ultraviolet radiation (UV) exposure–SAP 2.4.” As part of the CCSP  
25 Goal 2, SAP 2.4 will provide a synthesis and integration of the current knowledge of the stratospheric  
26 ozone layer, ozone-depleting substances, and ultraviolet radiation reaching the Earth’s surface.  
27

28 This product will contribute to and enhance the ongoing and iterative international process of producing  
29 and refining climate-related assessments and decision support tools. For instance, SAP 2.4 will integrate  
30 findings from the World Meteorological Organization (WMO) / United Nations Environment Programme  
31 (UNEP) 2006 assessment on the ozone layer, and the 2005 Special Report of the Intergovernmental Panel  
32 on Climate Change (IPCC) on *Safeguarding the Ozone Layer and the Global Climate System – Issues*  
33 *Related to Hydrofluorocarbons and Perfluorocarbons*. It will discuss these assessments in the context of  
34 the United States of America. The SAP will discuss ozone changes over North America, the  
35 contributions of the USA to ozone-depleting substances, and the UV changes due to the ozone layer  
36 changes over the North American continent. This Synthesis and Assessment Product will take advantage  
37 of these thoroughly vetted scientific assessments to prepare a product that can be used to inform domestic  
38 and international decision makers in government and industry, scientists, and the public.  
39

40 *1.2. Topic and Content*  
41

42 SAP 2.4 will address key issues related to the stratospheric ozone layer, including its changes in the past  
43 and expected levels in the future. Also, it will take account of the current abundances and emissions of  
44 ozone-depleting substances. Further, it will synthesize the best available information on the past and  
45 future levels of ultraviolet radiation at the Earth’s surface. Lastly, it will explore the interactions between  
46 climate change and stratospheric ozone changes. All of this will be carried out within the context of the  
47 USA to distill a regional assessment from the global assessments. More specifically, SAP 2.4 will:  
48

- 49 • Quantify current information on sources, sinks, and abundances of ozone-depleting  
50 substances and associated uncertainties. It will quantify the atmospheric lifetimes, the

1 ozone depletion potentials, and global warming potentials of many important past,  
2 present, and future emissions.

- 3 • Discuss levels of ozone in various regions of the stratosphere, including the polar regions.  
4 It will pay special attention to the Antarctic ozone hole.
- 5 • Provide information on the past, current, and future levels of ultraviolet radiation.
- 6 • Provide an assessment of the impact of climate and compositional changes on the future  
7 of the ozone layer.
- 8 • Identify where research supported by CCSP agencies is critical for future assessments of  
9 the ozone layer.
- 10 • Describe how these findings relate to human activities, with a particular emphasis on the  
11 U.S.

12 See Attachment 1 for more details

13  
14 Note: The report will cover the radiative forcing due to stratospheric ozone trends but will not  
15 extensively cover the impact of the trends on climate variability and change. A few  
16 impacts on climate will be noted and described qualitatively.

### 17 18 *1.3. Audience*

19  
20 The audience for SAP 2.4 includes scientists, decision makers in the public sector (Federal, State, and  
21 local governments), the private sector (chemical industry, transportation, and agriculture; and climate  
22 policy and health-related interest groups), the international community, and the general public. This broad  
23 audience is indicative of the diversity of stakeholder groups interested in knowledge of the stratospheric  
24 ozone layer, ozone-depleting substances, and ultraviolet radiation, and of how such knowledge might be  
25 used to inform decisions. The primary users of SAP 2.4 are intended to include, but are not limited to,  
26 officials involved in formulating climate and environmental policy, individuals responsible for managing  
27 emissions of ozone-depleting substances, and scientists involved in assessing and/or advancing the  
28 frontier of knowledge.

### 29 30 *1.4. Intended Use*

31  
32 SAP 2.4 will be used (1) as a state-of-the-art assessment of our knowledge of the stratospheric ozone  
33 layer, ozone-depleting substances, and ultraviolet radiation at the surface; (2) to provide the scientific  
34 basis for decision support to guide management and policy decisions that affect the ozone layer and  
35 emissions of ozone-depleting substances; (3) as a means of informing policymakers and the public  
36 concerning the general state of our knowledge of the stratospheric ozone layer and emissions of ozone-  
37 depleting substances with respect to the contributions of and impacts on the United States; and (4) to  
38 provide scientific information on the ozone layer to inform important stakeholder groups. Examples of  
39 these groups include: the chemical industry that produces substitutes of ozone-depleting substances;  
40 sectors of the U.S. economy that request exemptions from emissions of substances banned by the  
41 Montreal Protocol and its Amendments; and the climate-science community. Senior managers and the  
42 general public may use the Executive Summary of SAP 2.4 to improve their overall understanding of  
43 what is known and unknown about the effects of U.S. emissions on the stratospheric ozone layer and  
44 ultraviolet radiation at the surface. It will also provide an estimate of the impacts of the ozone layer  
45 changes on the country.

### 46 47 *1.5. Questions to be Addressed*

48  
49 Questions to be addressed by SAP 2.4 include:  
50

- 1 • What is the current state of the stratospheric ozone layer?
- 2 • What are the recorded changes in the emissions and concentrations of ozone-depleting
- 3 substances?
- 4 • What do the observations indicate about the abundances and trends of stratospheric ozone?
- 5 • What is the trend in the occurrence, depth, duration, and extent of the Antarctic ozone hole?
- 6 • What is the state of ozone depletion in the Arctic region?
- 7 • When can one expect recovery of the global ozone layer and of the Antarctic ozone hole?
- 8 • What are the influences of climate change on the recovery of the ozone layer?
- 9 • How has surface ultraviolet radiation changed in the past and what is expected for the future?
- 10 • What are the various possible emission scenarios that can be considered for any further policy
- 11 actions on emissions of ozone-depleting gases?

12  
13 These questions are starting points for producing SAP 2.4; they were developed by the proposed SAP 2.4  
14 Author Team (see Section 3) and refined based on the deliberations for the two international assessments  
15 that were noted earlier. The draft outline of major sections of the report is included in Attachment 1 to  
16 this prospectus.

## 17 18 19 **2. Contact Information: E-Mail and Telephone for Responsible Individuals** 20 **at the Lead and Supporting Agencies**

21  
22 The lead agency for SAP 2.4 is the National Oceanic and Atmospheric Administration (NOAA), which is  
23 also responsible for ensuring compliance with the Office of Management and Budget's *Information*  
24 *Quality Bulletin for Peer Review* ([http://www.whitehouse.gov/omb/inforeg/peer2004/peer\\_bulletin.pdf](http://www.whitehouse.gov/omb/inforeg/peer2004/peer_bulletin.pdf)).  
25 Dr. Krisa Arzayus of NOAA is the point of contact for matters concerning IQA compliance. The  
26 individuals responsible for the production of SAP 2.4 and acting as corresponding and lead authors are  
27 Drs. A.R. Ravishankara and Michael J. Kurylo.

28  
29 Contributing agency leads are presented in the following table:

31 Member	Agency		
32 <u>Agency</u>	<u>Lead</u>	<u>Email</u>	<u>Phone</u>
33 NOAA	A. R. Ravishankara	A.R.Ravishankara@noaa.gov	(303) 497-5785
34 NASA	Michael J. Kurylo	michael.j.kurylo@nasa.gov	(202) 358-0237
35 USDA	Ken Vick		
36 EPA	Terry J. Keating		
37 NSF	Anne-Marie Schmoltner		
38 DoD	Richard M. Bevilacqua		

## 39 40 41 **3. Authors: Required Expertise of Authors and** 42 **Biographical Information for Proposed Authors**

43  
44 In 2006, the authors for this SAP were chosen based on their expertise and participation in the  
45 international assessments from which this product will derive a great deal of information. The SAP 2.4  
46 Author Team and their roles are:

48 Dr. A. R. Ravishankara, NOAA	Overall Lead
49 Dr. Michael J. Kurylo, NASA	Overall Lead
50 Dr. Richard Bevilacqua, NRL / DoD	Scientific Content

1	Dr. Jeff Cohen, USEPA	Scientific Content
2	Dr. John Daniel, NOAA	Scientific Content
3	Dr. Anne Douglass, NASA	Scientific Content
4	Dr. David Fahey, NOAA	Scientific Content
5	Dr. Jay Herman, NASA	Scientific Content
6	Dr. Terry Keating, USEPA	Scientific Content
7	Dr. Malcolm Ko, NASA	Scientific Content
8	Dr. Stephen Montzka, NOAA	Scientific Content
9	Dr. Paul Newman, NASA	Scientific Content
10	Dr. V. Ramaswamy, NOAA	Scientific Content
11	Dr. Anne-Marie Schmoltner, NSF	Scientific Content
12	Dr. Ken Vick, USDA	Scientific Content

13  
14 The SAP 2.4 Author Team will be responsible for organizing and outlining SAP 2.4 and for its final  
15 content and submission to NOAA. They will provide all the inputs to SAP 2.4 and will lead the overall  
16 synthesis and integration of the report. They will provide oversight and editorial review of individual  
17 chapters and will prepare any overview chapters and the Executive Summary. Their biographies are  
18 provided in Attachment 2. Drs. Kurylo and Ravishankara will coordinate the SAP 2.4 Author Team's  
19 activity.

20  
21 The responsibility for writing each individual chapter of SAP 2.4 has been assigned to one or more  
22 scientific experts in the topic area of the chapter; this person (or persons) will be designated the lead  
23 chapter author(s). These authors were chosen for their recognized expertise in various specific areas that  
24 are covered in the product. This is based on the quality and relevance of current publications in the peer-  
25 reviewed literature pertaining to their chapter topics, past or present positions of leadership in the topic  
26 fields, and other documented experience and knowledge of high relevance. All authors will be listed in  
27 association with their contributions (e.g., chapters) in the final report.

28  
29 Their biographies are provided in Attachment 2. The SAP 2.4 contributing agency leads discussed the  
30 draft chapter outline and candidate chapter authors in their initial meeting held at NASA Goddard Space  
31 Flight Center in Maryland on May 22, 2006.

#### 32 33 34 **4. Stakeholder Interactions**

35  
36 A process for engaging important stakeholder groups and establishing an ongoing dialogue with them is a  
37 priority activity. Stakeholder involvement is essential to ensure *transparency* – open access to information  
38 on the SAP 2.4; *feedback on relevance* – review and comment on the SAP 2.4 process and verification  
39 that information produced by the SAP 2.4 will be useful; and *credibility* – recognition by the stakeholders  
40 of the scientific validity and independence of the SAP 2.4. These activities will be the responsibility of  
41 the SAP 2.4 Author Team.

42  
43 As a first step in this process, the plan for this SAP was presented at the CCSP workshop, “U.S. Climate  
44 Change Science Program, Climate Sciences in Support of Decision Making,” held in Arlington, Virginia,  
45 during 14-16 November 2005, where it was well received

46  
47 Further stakeholder input will be solicited through the public comment period for this prospectus and the  
48 public comment period for the draft final report. All comments submitted during the public reviews will  
49 be made publicly available and these comments will be carefully considered by the authors.

50  
51

## 5. Drafting Process (Including Materials to be Used in Preparing the Product)

The SAP 2.4 contributing agency leads have discussed the draft chapter outline (see Attachment 1) in their initial consultations with science, government, and other stakeholders. Additional venues for input will be explored; if found, they will be posted on the CCSP website. However, it is anticipated that the input to the web-posted prospectus will be the major input from the public.

The two international assessments, which were vetted by hundreds of scientists from around the world, form the basis of the SAP product.

All authors will be provided with NOAA's Information Quality Guidelines as specified in the *Guidelines for Producing CCSP Synthesis and Assessment Products*, which will include compliance with the overall Office of Management and Budget (OMB) guidelines: *OMB Guidelines for Ensuring and Maximizing the Quality, Objectivity, Utility, and Integrity of Information Disseminated by Federal Agencies* and the *Information Quality Bulletin for Peer Review*.

The authors of SAP 2.4 will be expected to emphasize accuracy and precision of numerical information, confidence levels, and characterization of uncertainties. SAP 2.4 will provide a clear discussion of uncertainties and how uncertainties may be reduced, preferably through a section of each chapter in which measurements, model results, or combinations of data and models occur. Whenever appropriate and possible, numerical values will be accompanied by measures of uncertainty (e.g.,  $\pm x$  units or percent). Where the uncertainty cannot be quantified, an explanation or justification will be given.

To ensure consistency and thoroughness in the treatment of uncertainties across all chapters of SAP 2.4, the SAP 2.4 Author Team will maintain regular oversight of overall data and information quality as presented in workshops and in draft text.

## 6. Review

NOAA will ensure that SAP 2.4 is reviewed at all stages as specified in the *Guidelines for Producing CCSP Synthesis and Assessment Products* and consistent with the *Information Quality Act* and *Information Quality Bulletin for Peer Review*, that comments and other feedback are provided to the SAP 2.4 Author Team for response, and that comments and responses are documented and made publicly available.

### 6.1. During Drafting Period

The SAP 2.4 Author Team will post on the CCSP web site the list of authors and draft versions of the outline, with a mechanism for providing comments through the web site. The SAP 2.4 Author Team will also establish a process and standards for ongoing information quality review.

### 6.2. Expert Review of First Draft

NOAA will coordinate a formal expert review through the National Research Council (NRC) of the U.S. National Academy of Sciences in 2007. This review will be conducted according to the policies and procedures of the National Research Council (NRC).

### 6.3. Public Review of the Second Draft

1 After revision in response to the expert review, the second draft of SAP 2.4 will be released for public  
2 comment. The public comment period will be 45 days. Following this comment period, the authors will  
3 prepare a third draft of the report, taking into consideration the comments submitted during the public  
4 comment period. The scientific judgment of the authors will determine responses to the technical  
5 comments. All comments submitted during the public review will be made publicly available. The public  
6 comment period will begin after the NRC review and is expected to occur toward the end of 2007. The  
7 public will have the opportunity to access the NRC review of the report prior to the 45-day public review  
8 period.  
9

#### 10 6.4. *CCSP and National Science and Technology Council (NSTC) Review of the Third Draft*

11  
12 Once the revisions to the second draft are complete, the SAP 2.4 Author Team will submit the third draft  
13 of the Synthesis and Assessment Product to NOAA. Once NOAA determines that the report conforms to  
14 CCSP and IQA guidelines, it will submit the draft product and a compilation of the comments received to  
15 the CCSP Interagency Committee. If the CCSP Interagency Committee determines that further revision  
16 is necessary, their comments will be sent to NOAA to seek consideration and resolution by the SAP 2.4  
17 Author Team. If needed, the NRC will be asked to review the revised SAP.  
18

19 After the CCSP Interagency Committee review determines that no further revisions are needed and  
20 NOAA certifies that the report has been prepared in conformance with the *Guidelines for Producing*  
21 *CCSP Synthesis and Assessment Products* and the *Information Quality Act* (including ensuring  
22 objectivity, utility, and integrity as defined in 67 FR 8452), the CCSP Interagency Committee will submit  
23 the report to the National Science and Technology Council (NSTC) for clearance. Clearance will require  
24 the concurrence of all members of the Committee on Environment and Natural Resources. The CCSP  
25 Interagency Committee will be responsible for ensuring that comments generated during the NSTC  
26 review are addressed. They will consult with NOAA and the authors to develop an appropriate response.  
27 If the Synthesis and Assessment Product should need to be revised, the revisions will be written by the  
28 SAP 2.4 Author Team and then routed back through NOAA and the CCSP Interagency Committee to the  
29 NSTC.  
30

31 After clearance and prior to publication, the SAP 2.4 Author Team will be given the opportunity to  
32 examine the final report. If at this stage, or any earlier stage in this process, an individual author cannot  
33 accept the outcomes of the writing, review, and revision process, they will be accorded the opportunity to  
34 withdraw their name from the publication.  
35  
36

### 37 **7. Related Activities, Including Other National and International Assessment Processes**

38  
39 SAP 2.4 will utilize, to the maximum extent possible, the information available from two international  
40 assessments: the WMO/UNEP 2006 assessment on the stratospheric ozone layer, to be released in spring  
41 of 2007, and the Special Report of IPCC on *Safeguarding the Ozone Layer and the Global Climate*  
42 *System- Issues Related to Hydrofluorocarbons and Perfluorocarbons* published in 2005. When  
43 necessary, other existing data, programs, publications, and related activities in the United States or  
44 elsewhere will be used for input.  
45  
46

### 47 **8. Communications: Proposed Method of Publication and Dissemination of the Product**

48  
49 Once the National Science and Technology Council (NSTC) clearance has been obtained, NOAA will  
50 coordinate publication, printing, and release of SAP 2.4. SAP 2.4 will be made available through the

1 CCSP Office; it will also be made available electronically on both the CCSP and NOAA web sites. The  
 2 published report will follow the standard format for all CCSP Synthesis and Assessment Products.  
 3

4 The SAP 2.4 Author Team and other participants in SAP 2.4 will publicize the SAP 2.4 process widely.  
 5 The purposes are to disseminate information about the process and to encourage key stakeholders to use  
 6 the SAP 2.4 report as a tool to promote informed management and decision-making. A package of  
 7 material will be created for all those involved in the SAP 2.4 to use as they travel in their ongoing  
 8 professional work.  
 9

## 10 11 **9. Proposed Timeline**

12  
13 The SAP 2.4 schedule is:

14	15	16	17
<u>Activity</u>	<u>Months</u> <u>From</u> <u>Start</u>	<u>Estimated</u> <u>Completion</u> <u>Date</u>	
18 Planning the SAP product	0	August 2005	
19 First presentation to stakeholders	3	November 2005	
20 Establish author team	9	May 2006	
21 Prospectus development	12	August 2006	
22 CCSP posts prospectus for public review	15	November 2006	
23 Public review period for prospectus ends	16	December 2007	
24 CCSP posts revised, final prospectus	17	January 2007	
25 Submit draft SAP 2.4 to NOAA	23	July 2007	
26 Complete NRC review of draft SAP 2.4	26	October 2007	
27 Deliver revised SAP 2.4 to NOAA	27	November 2007	
28 Post revised SAP 2.4 for public review and comment	28	December 2007	
29 Public review and comment period closes	29	January 2008	
30 Complete and deliver SAP 2.4 to NOAA	30	March 2008	
31 CCSP and NSTC review completed and SAP 2.4 released	32	April 2008	

## 32 33 34 35 **List of Attachments**

- 36  
37 1. Chapter Structure of Synthesis and Assessment Product 2.4: Trends in emissions of ozone-depleting  
 38 substances, ozone layer recovery, and implications for ultraviolet radiation exposure  
 39 2. Biographies of authors of the SAP 2.4  
 40

1 **ATTACHMENT 1. CHAPTER STRUCTURE AND OUTLINE OF SYNTHESIS AND**  
2 **ASSESSMENT PRODUCT 2.4: TRENDS IN EMISSIONS OF OZONE-DEPLETING SUBSTANCES,**  
3 **OZONE LAYER RECOVERY, AND IMPLICATIONS FOR ULTRAVIOLET RADIATION**  
4 **EXPOSURE**

5  
6  
7 **1. Introduction (*Kurylo, Ravishankara, and Schmoltner*)**

8 This section will introduce the material to be covered under SAP 2.4, with an emphasis on how the Montreal  
9 Protocol (together with its Amendments and Adjustments) has been effective in protecting the stratospheric ozone  
10 layer from further destruction by halocarbons and what its global and national implications are for changes in  
11 ultraviolet radiation exposure and climate change.

12  
13 **2. Current trends, mixing ratios, and emissions (ozone- & climate-related chemicals) (*Montzka,***  
14 ***Vick, Cohen, Daniel*)**

15 This chapter will focus on a discussion of recent changes in the production, emission, and atmospheric  
16 burden of ozone-depleting substances (ODS) and long-lived replacements. The role of the Montreal  
17 Protocol in bringing about these changes will be highlighted. A discussion of banks (ODSs produced but  
18 not yet emitted), critical use exemptions, and other factors pertinent to the present and future atmospheric  
19 burden of halogens will be included. Recent changes in total atmospheric chlorine, bromine, and  
20 equivalent chlorine from these long-lived gases will be reviewed to allow a discussion of the relevance  
21 these changes have had or will have for the ozone layer. Finally, aggregate changes in the radiative  
22 forcing supplied by ODSs and their replacements will be reviewed to gauge the influence these changes  
23 might have had or will have on climate. The atmospheric abundances of the ozone-depleting gases as  
24 reported by NOAA and NASA to comply with the congressional mandate of the Clean Air Act, will be  
25 discussed.

26  
27 **3. Ozone & UV observations (*Herman, Newman, Bevilacqua, Keating*)**

28 This chapter will briefly review observations and current understanding and uncertainties in long-term  
29 trends in ozone and ground ultraviolet radiation levels. Because of fundamentally different properties and  
30 issues, the chapter will treat the polar regions separately from the low and mid-latitudes. For each of  
31 these main geographic regions, both total column and ozone profiles will be discussed. Total column  
32 ozone and the vertical profiles of ozone in the following regions will be examined: Mid- and low  
33 latitudes, polar Northern Hemisphere, and polar Southern Hemisphere (ozone hole). Ground-level  
34 ultraviolet radiation levels in the following regions will also be examined: Mid- and low latitudes, polar  
35 Northern Hemisphere, and polar Southern Hemisphere.

36  
37 Each of these broad categories will be broken down into ground-based and satellite observations for well-  
38 established techniques.

39  
40 **4. How do climate change and stratospheric ozone loss interact? (*Fahey, Douglass, Schmoltner, and***  
41 ***Ramaswamy*)**

42 This chapter will examine the coupling between ozone depletion from ODSs and changes to the earth's climate,  
43 including stratospheric temperatures changes during the past two decades, due in part to increased radiative  
44 forcing from growing greenhouse gas abundances. It will also examine the impact of cooler stratospheric  
45 temperatures on stratospheric ozone amounts. It will examine the influence of changed ozone abundance,  
46 particularly in southern polar regions, on circulation not only in the stratosphere but also in the troposphere. It  
47 will further explore the influence of changes in circulation caused by climate forcing, such as increases in the  
48 global transport of air from the troposphere to the stratosphere, on ozone concentrations. The projected future  
49 ozone amounts will be examined based on our current understanding of the coupling of stratospheric ozone to  
50 climate parameters. The chapter will emphasize the return to periods when ODSs concentrations decline to pre-  
51 1980 values and the changes in climate parameters in the next century.

1  
2 **5. The future & recovery (*Ko, Daniel, Herman, Newman, and Ramaswamy*)**  
3 Using the emission scenarios from the WMO/UNEP ozone assessment, the corresponding concentrations  
4 of ODSs will be presented along with species specific contributions to Equivalent Effective Stratospheric  
5 Chlorine (EESC) and to instantaneous radiative forcing. These scenario results will be assessed to  
6 demonstrate the extent to which production- and emission-limiting actions can still affect the future  
7 evolution of ODSs. The expected responses in global ozone, Antarctic ozone, and UV at the surface will  
8 be discussed based on the EESC results. The possible implications of future climate changes will also be  
9 discussed.

10

## ATTACHMENT 2. BIOGRAPHIES OF AUTHORS OF THE SAP 2.4

**Akkihebbal R. RAVISHANKARA**

NOAA/ESRL/Chemical Sciences Division  
325 Broadway  
Boulder, CO 80305  
Tel: (303) 497-5821; Fax: (303) 497-5822

**EDUCATION**

1975 Ph.D. Physical Chemistry, University of Florida  
1970 M.Sc. Physical Chemistry, University of Mysore, India  
1968 B.Sc. Chemistry and Physics, University of Mysore, India

**EMPLOYMENT HISTORY**

National Oceanic and Atmospheric Administration  
Acting Director, Chemical Sciences Division 2005-Present  
Chief, Atmospheric Chemical Processes Program 1993-Present

**RESEARCH INTERESTS**

Climate and climate change; Regional air quality; Atmospheric chemistry; chemical kinetics; photochemistry; heterogeneous and multiphase chemistry; Aerosol formation and their chemical and optical properties; Measurement of atmospheric gas phase species; Measurement of atmospheric aerosols; Modeling of atmospheric processes.

**SELECTED RECENT AWARDS**

American Chemical Society's award on Creative Advances in Environmental Sciences 2005  
Presidential Meritorious Rank Award 2005  
Fellow of the Royal Society of Chemistry, UK (with title FRSC) 2004  
Elected to U.S. National Academy of Sciences 2000  
Polanyi Medal of Royal Society of Britain (Gas Kinetics Div.) 1998  
Fellow, American Geophysical Union 1997

**SELECTED PUBLICATIONS (related to the S&A product's topic)**

1. Pulsed laser photolysis kinetics study of the  $O(^3P) + ClO$  reaction, *J. Chem. Phys.* 89, 5670 (1988), J.M. Nicovich, P.H. Wine and **A. R. Ravishankara**.
2. Remote sensing observations of nighttime OClO column during the Airborne Antarctic Ozone Experiment, September 8, 1987, *J. Geophys. Res.* 94, 11405 (1989), A. Wahner, R.O. Jakoubek, G.H. Mount, **A. R. Ravishankara** and A.L. Schmeltekopf.
3. The rate coefficient for the termolecular channel of the self-reaction of ClO, *J. Phys. Chem.* 94, 4896 (1990), M. Trolier, R.L. Mauldin III and **A. R. Ravishankara**.
4. The reaction probabilities of ClONO<sub>2</sub> and N<sub>2</sub>O<sub>5</sub> on polar stratospheric cloud materials, *J. Geophys. Res.* 96, 5081 (1991), D.R. Hanson and **A. R. Ravishankara**.
5. New measurement of the rate coefficient for the reaction of OH with methane, *Nature* 350, 406 (1991), G.L. Vaghjiani and **A. R. Ravishankara**.
6. Atmospheric lifetime of CHF<sub>2</sub>Br, a proposed substitute for halons, *Science* 252, 693 (1991), R. Talukdar, A. Mellouki, T. Gierczak, J.B. Burkholder, S.A. McKeen and **A. R. Ravishankara**.
7. Atmospheric fate of CF<sub>2</sub>H<sub>2</sub>, CH<sub>3</sub>CF<sub>3</sub>, CHF<sub>2</sub>CF<sub>3</sub>, and CH<sub>3</sub>CFCl<sub>2</sub>: Rate coefficients for reactions with OH and UV absorption cross sections of CH<sub>3</sub>CFCl<sub>2</sub>, *J. Phys. Chem.* 95, 5815 (1991), R. Talukdar, A. Mellouki, T. Gierczak, J.B. Burkholder, S.A. McKeen and **A. R. Ravishankara**.

- 1 8. The reaction probabilities of ClONO<sub>2</sub> and N<sub>2</sub>O<sub>5</sub> on 40 and 75% sulfuric acid solutions, *J. Geophys. Res.* 96,  
2 17,307 (1991), D.R. Hanson and **A. R. Ravishankara**.
- 3 9. The reaction probabilities of ClONO<sub>2</sub> and N<sub>2</sub>O<sub>5</sub> on polar stratospheric cloud materials, *J. Geophys. Res.* 96,  
4 5081 (1991), D.R. Hanson and **A. R. Ravishankara**.
- 5 10. New measurement of the rate coefficient for the reaction of OH with methane, *Nature* 350, 406 (1991), G.L.  
6 Vaghjiani and **A. R. Ravishankara**.
- 7 11. Atmospheric lifetime of CHF<sub>2</sub>Br, a proposed substitute for halons, *Science* 252, 693 (1991), R. Talukdar, A.  
8 Mellouki, T. Gierczak, J.B. Burkholder, S.A. McKeen and **A. R. Ravishankara**.
- 9 12. Atmospheric fate of CF<sub>2</sub>H<sub>2</sub>, CH<sub>3</sub>CF<sub>3</sub>, CHF<sub>2</sub>CF<sub>3</sub>, and CH<sub>3</sub>CFCl<sub>2</sub>: Rate coefficients for reactions with OH and  
10 UV absorption cross sections of CH<sub>3</sub>CFCl<sub>2</sub>, *J. Phys. Chem.* 95, 5815 (1991), R. Talukdar, A. Mellouki, T.  
11 Gierczak, J.B. Burkholder, S.A. McKeen and **A. R. Ravishankara**.
- 12 13. The reaction probabilities of ClONO<sub>2</sub> and N<sub>2</sub>O<sub>5</sub> on 40 and 75% sulfuric acid solutions, *J. Geophys. Res.* 96,  
13 17,307 (1991), D.R. Hanson and **A. R. Ravishankara**.
- 14 14. Atmospheric lifetimes of long-lived species, *Science*, 259, 194-199 (1993), **A. R. Ravishankara**, S.  
15 Solomon, A.A. Turnipseed and R.F. Warren.
- 16 15. Do hydrofluorocarbons destroy stratospheric ozone?, *Science* 263, 71-75 (1994), **A. R. Ravishankara**, A.A.  
17 Turnipseed, N.R. Jensen, S. Barone, M. Mills, C.J. Howard and S. Solomon.
- 18 16. Heterogeneous reactions in sulfuric acid aerosols: A framework for model calculations, *J. Geophys. Res.* 99,  
19 3615-3629 (1994), D.R. Hanson, **A. R. Ravishankara** and S. Solomon.
- 20 17. On the role of iodine in ozone depletion, *J. Geophys. Res.* 99, 20,491-20,499 (1994), S. Solomon, R.R.  
21 Garcia, and **A. R. Ravishankara**.
- 22 18. Difference in the reactivity of Type I polar stratospheric clouds depending on their phase, *Journal of*  
23 *Geophysical Research*, 101 (D2), 3885-3890, 1996, **A. R. Ravishankara** and D.R. Hanson.
- 24 19. Summer in the (polar) stratosphere, *Science*, 1, 285, 208-210, 1999, D. W. Fahey and **A. R. Ravishankara**.
- 25 20. The atmospheric degradation of 1-bromopropane (CH<sub>3</sub>CH<sub>2</sub>CH<sub>2</sub>Br): The photochemistry of bromoacetone,  
26 *Geophys. Res. Lett.*, 29, OID: 10.1029/2002GL014712, J. B. Burkholder, M. K. Gilles, T. Gierczak, and **A.**  
27 **R. Ravishankara**.

#### 28 **PROFESSIONAL MEMBERSHIPS**

30  
31  
32

1 **Richard Michael Bevilacqua**  
2 Remote Sensing Division  
3 Naval Research Laboratory, Code 7200  
4 Washington, DC 20375  
5 Tel: (202) 767-3391; Fax: (202) 404-7453  
6

7 **EDUCATION:**

8 1972-76 B.A. Physics, Temple University, Philadelphia, PA  
9 1976-78 M.S. Meteorology, Penn State University, University Park, PA  
10 1978-82 Ph.D. Meteorology, Penn State University, University Park, PA  
11

12 **EMPLOYMENT HISTORY:**

13 Oct 1982 - Oct 1984: NRC Postdoc at NRL  
14 Oct 1984 - Jul 1985: Research Associate, S.F. Associates, Inc. (at NRL)  
15 Jul 1985 - Feb. 1991: Research Physicist, NRL  
16 Feb. 1991 - Feb. 1996: Head Middle Atmosphere Physics Section, NRL  
17 March 1996 – May 2004: Head Remote Sensing Physics Branch, NRL  
18 May 2004 – March 2006: Acting Superintendent Remote Sensing Division  
19 March 2006 – present: Superintendent Remote Sensing Division  
20

21 **RESEARCH INTERESTS:**

22 Dr. Bevilacqua's main research interests lie in remote sensing of the atmosphere, atmospheric retrieval  
23 methodologies, middle atmospheric water vapor, stratospheric polar ozone processes, and in the  
24 photochemistry and dynamics of the stratosphere. He has more than 25 years experience in the retrieval of  
25 atmospheric constituents from ground-based and space-based limb-viewing measurements, and in  
26 atmospheric science studies derived from these measurements. He has been the P.I of both the Polar  
27 Ozone and Aerosol Measurement (POAM) II and III satellite-based experiments, and project scientist for  
28 the shuttle-based Millimeter-wave Atmospheric Sounder (MAS) experiment. He is the author or coauthor  
29 of more than 100 refereed journal publications. Dr. Bevilacqua has spent his entire scientific career at the  
30 Naval Research Laboratory (NRL), and is currently Head of the NRL Remote Sensing Division.  
31

32 **SELECTED RECENT AWARDS:**

33 *NRL Alan Berman Research Publication Award: 1983, 1990, 1995, 1996, 1998, 2000, 2002, 2004, and 2005.*  
34 NASA SOLVE I Science Team Group Achievement Award: 2001  
35 NASA SOLVE II Science Team Group Achievement Award: 2004.  
36 UARS Team NASA Honor Group Achievement Award: 2006.  
37 Selection into the Senior Executive Service (SES): 2006.  
38

39 **SELECTED PUBLICATIONS (RELATED TO ATMOSPHERIC COMPOSITION)**

- 40 1) "Measurements of middle atmospheric water vapor from low latitudes and mid-latitudes in the  
41 Northern Hemisphere, 1995-1998," G.E. Nedoluha, R.M. Bevilacqua, R.M. Gomez, B.C. Hicks, J.  
42 Geophys. Res., 104, 19257-19266, 1999.  
43 2) "Observations of boreal forest fire smoke in the stratosphere by POAM III, SAGE II, and lidar in  
44 1998," M. Fromm, J. Alfred, K. Hoppel, J. Hornstein, R. Bevilacqua, E. Shettle, R. Servranckx, Z. Li,  
45 and B. Stocks, Geophys. Res. Lett., 27, 1407-1410, 2000.  
46 3) "POAM III measurements of dehydration in the Antarctic lower stratosphere," G.E. Nedoluha, R.M.  
47 Bevilacqua, K.W. Hoppel, M. Daehler, E.P. Shettle, J.H. Hornstein, M.D. Fromm, J.D. Lumpe, J.E.  
48 Rosenfield, Geophys. Res. Lett., 27, 1683-1686, 2000.  
49 4) "Stratospheric NO<sub>x</sub> enhancements in the southern hemisphere vortex in spring/summer of 2000," C.  
50 E. Randall, D.E. Siskind, and R.M. Bevilacqua, Geophys. Res. Lett., 28, 2385-2388, 2001.

- 1 5) "POAM III measurements of water vapor in the upper troposphere and lowermost stratosphere," G.E.  
2 Nedoluha, R.M. Bevilacqua, K.W. Hoppel, J.D. Lumpe, and H. Smit, *J. Geophys. Res.*,  
3 10.1029/2001JD000793, 2002.
- 4 6) "POAM III observations of Arctic ozone loss for the 1999/2000 winter," K.W. Hoppel, R.M.  
5 Bevilacqua, G.E. Nedoluha, C. Deniel, F. Lefevre, J.D. Lumpe, M.D. Fromm, J. Rosenfield, and M.  
6 Rex, *J. Geophys. Res.*, 10.1029/2001JD000476, 2002.
- 7 7) "Observations and analysis of PSCs detected by POAM III during the 1999/2000 Northern  
8 Hemisphere winter," R.M. Bevilacqua, M.D. Fromm, J.M. Alfred, J.S. Hornstein, G.E. Nedoluha,  
9 K.W. Hoppel, J.D. Lumpe, C.E. Randall, E.P. Shettle, E/V. Browell, C. Butler, A. Dornbrack, and  
10 A.W. Strawa, *J. Geophys. Res.*, 10.1029/2001JD00047, 2002.
- 11 8) "On the unexplained stratospheric ozone losses during cold Arctic Januaries," Rex, M, R.J. Salawitch,  
12 M.L. Santee, J.W. Waters, K. Hoppel, and R.M. Bevilacqua, *Geophys. Res. Lett.*,  
13 10.1029/2002GL016008, 2003.
- 14 9) "POAM III Observations of the Anomalous Ozone Hole, Hoppel, K., R.M. Bevilacqua, D. Allen, G.  
15 Nedoluha. C. Randall, *Geophys. Res. Lett.*, 10.1029/2003GL016899, 2003.
- 16 10) "POAM measurements of PSCs and water vapor in the 2002 Antarctic vortex," G.E. Nedoluha, R.M.  
17 Bevilacqua, M.D. Fromm, K.W. Hoppel, and D.R Allen, *Geophys. Res. Lett.*,  
18 10.1029/2003GL017577, 2003.
- 19 11) "Unusual stratospheric transport and mixing during the 2002 Antarctic winter," Allen, D.R., R.M.  
20 Bevilacqua, G.E. Nedoluha, C.E. Randall, and G.L. Manney," *Geophys. Res. Lett.*,  
21 10.1029/2003GL017117, 2003.
- 22 12) "An evaluation of trends in middle atmospheric water vapor as measured by HALOE, WVMS, and  
23 POAM," Nedoluha, G.E., R.M. Bevilacqua, R.M. Gomez, B.C. Hicks, J.M. Russell, and B.J. Connor,  
24 *J. Geophys. Res.*, 10.1029/2002JD003332, 2003.
- 25 13) "New directions: Eruptive transport to the stratosphere: Add fire-convection to volcanoes," Fromm,  
26 M.F, R.M. Bevilacqua, B. Stocks, and R. Servranckx, *New Directions/Atmospheric Environment* 38  
27 (2004) 163-165.
- 28 14) "Reconstruction and simulation of stratospheric ozone distributions during the 2002 austral winter,"  
29 Randall C.E., G.L. Manney, D.R. Allen. R.M. Bevilacqua, J. Hornstein, C. Trepte, W. Lahoz, J.  
30 Ajtec, G. Bodeker. *JAS*, 62 (3), 748-764, 2005.
- 31 15) "Pyro-cumulonimbus injection of smoke into the stratosphere: observations and impact of a super  
32 blowup in northwestern Canada on 3-4 August 1998," Fromm, M.D., R.M. Bevilacqua, R.  
33 Servranckx, J. Rosen, J. Thayer, J. Herman, D. Larko. *J. Geophys. Res.*, 110 (D8): D08205, 2005.
- 34 16) "Fall vortex ozone as a predictor of springtime total ozone at high northern latitudes," S. R. Kawa,  
35 P. A. Newman, R. S. Stolarski, R. M. Bevilacqua, *Atmos. Chem. Phys.*, 5, 1655-1663, 2005.
- 36 17) "A measurement/model comparison of ozone photochemical loss in the Antarctic ozone hole using  
37 POAM observations and the Match technique," Hoppel, K., R.M. Bevilacqua, T. Canty, R. Salawitch,  
38 M. Santee, *J. Geophys. Res.*, 110, D19304, 2005.
- 39 18) "Reduced ozone loss at the upper edge of the Antarctic ozone hole during 2001-2004, Hoppel, K., G.  
40 Nedoluha, M. Fromm, D. Allen, R.M. Bevilacqua, J. Alfred, B. Johnson, and G. Konig-Langlo,  
41 *Geophys. Res. Lett.*, 32, doi 10.1029/2005GL023968, 2005.
- 42 19) "Microphysical modeling of southern polar dehydration during the 1998 winter and comparison with  
43 POAM III observations," Benson C. M., K. Drdla, G. E. Nedoluha, E. P. Shettle, K. W. Hoppel, R.  
44 M. Bevilacqua *J. Geophys. Res.*, 111, D07201, doi:10.1029/2005JD006506, 2006.
- 45 20) "Arctic winter 2005: implications for stratospheric ozone loss and climate change," M. Rex, and 33  
46 authors including R.M. Bevilacqua, *Geophys. Res. Lett.*, in press, 2006.

**DAVID W. FAHEY**

National Oceanic and Atmospheric Administration (NOAA)  
Earth System Research Laboratory/Chemical Sciences Division  
325 Broadway CSD6  
david.w.fahey@noaa.gov  
Boulder, Colorado 80305 USA  
303-497-5277

**Specialized Professional Expertise**

- Measurements of reactive nitrogen trace-gas species in the atmosphere involving catalysis, chemiluminescence detection, and ion-molecule reactions
- Design and construction of ground-based and aircraft instrumentation for atmospheric measurements of trace gases and aerosols
- Interpretation of observations of long-lived and reactive species and aerosols in the lower stratosphere and upper troposphere
- Evaluation of scientific results for international assessments of ozone depletion and climate change

**Professional Experience**

1981 - present      Research Physicist  
Meteorological Chemistry Group, NOAA Aeronomy Laboratory  
1979 - 1981      National Research Council Postdoctoral Research Associate  
Ion Chemistry Program, NOAA Aeronomy Laboratory

**Academic Background**

B.S. (1975) in Physics, University of Wisconsin, Madison, Wisconsin  
M.S. (1977) and Ph.D. (1979) in Physics, University of Missouri, Rolla, Missouri

**Selected Professional Associations and Honors**

Chair, Atmospheric Chemistry Gordon Research Conference, 4 – 9 September 2005, Big Sky, MT.  
Fellow of the Cooperative Institute for Research in Environmental Sciences (CIRES), University of Colorado, Boulder, Colorado, April 2003 - present.  
Highly Cited Researcher, ISI Web of Knowledge (ISI-Thomson Scientific, Philadelphia, PA), 2002, one of the top 100 cited researchers in Geosciences between 1980 and 2000.  
Fellow of the American Geophysical Union, 2002, for 'Elucidating the role of nitrogen oxides in the stratosphere via field measurements and interpretations.'  
Recipient of the U. S. Department of Commerce Silver Medal for Meritorious Federal Service, December 1996, for 'Leadership in making the first direct measurements of supersonic aircraft emissions and analyzing the atmospheric implications.'  
Recipient of the American Meteorological Society Henry G. Houghton Award, January 1996, for 'Outstanding contributions to our understanding of the ozone layer through airborne observations and theoretical analyses.'  
Outstanding Scientific Paper Award, Office of Oceanic and Atmospheric Research, National Oceanic and Atmospheric Administration: 1995, 1997, 1998, 2002, 2005.

**Selected Airborne Science Responsibilities**

Co-Project Scientist for the NOAA Unmanned Aerial System (UAS) Flight Demonstration Project in April-November 2005 involving the Altair UAS of General Atomics Aeronautical Systems, Inc..  
Co-Project Scientist for the NASA Aura Validation Experiment campaigns in January and October-November 2004 and June 2005 with the WB-57F high-altitude aircraft.  
Project Scientist for the 1997 NASA Photochemistry of Ozone Loss in the Arctic Region in Summer (POLARIS) campaign with the ER-2 high-altitude aircraft.

**Selected International Assessment Participation**

Lead Author of Chapter 2, *Changes in Atmospheric Constituents and in Radiative Forcing*, in the Fourth Assessment Report, Working Group I, Intergovernmental Panel on Climate Change, 2007.

1 Lead Author of '20 Questions and Answers about the Ozone Layer,' Scientific Assessment of Ozone  
2 Depletion: 2002, Global Ozone Research and Monitoring Project – Report No, 47, World  
3 Meteorological Organization, Geneva, 2003.

4 Coordinating Lead Author of 'Aviation-produced aerosols and cloudiness', Chapter 3, Aviation and the  
5 Global Atmosphere, Intergovernmental Panel on Climate Change, May 1999.

US Environmental Protection Agency  
Office of Air and Radiation  
1200 Pennsylvania Avenue NW (MC 6103A)  
Washington DC 20460  
Tel: (202) 564-1174; Fax: (202) 564-1554

**EDUCATION**

1997 Ph.D. Environmental Sciences and Engineering, University of North Carolina, Chapel Hill  
1989 M.S.P.H. Environmental Sciences and Engineering, University of North Carolina, Chapel Hill  
1987 B.S. Environmental Sciences, University of California, Riverside

**EMPLOYMENT HISTORY**

2003 – Present Senior Environmental Scientist, US Environmental Protection Agency, Office of Air & Radiation, Washington, DC  
2000 – 2003 Environmental Scientist, U.S. Environmental Protection Agency, Office of Air & Radiation, Washington, DC  
1998 – 2000 American Association for the Advancement of Science Fellow at the U.S. Environmental Protection Agency, Office of Air and Radiation, Washington, DC  
1997 – 1998 Global Environmental Assessment Project Fellow, Kennedy School of Government, Harvard University, Cambridge, MA  
1991 – 1992 Air Quality Scientist, Warzyn, Inc, Pasadena, CA  
1989 – 1991 Air Quality Scientist, AeroVironment, Inc., Monrovia, CA

**SCIENTIFIC INTERESTS**

Regional air quality; intercontinental transport of air pollutants; air quality and climate interactions; use of scientific information in environmental policy making.

**CURRENT POSITION**

Dr. Terry Keating is a senior environmental scientist with the Office of Air and Radiation (OAR) of the U.S. Environmental Protection Agency, where he advises senior management on scientific issues related to air quality management at the national and international level. Dr. Keating's responsibilities include co-chairing the international Task Force on Hemispheric Transport of Air Pollutants under the Convention on Long Range Transboundary Air Pollution, as well as EPA's International Transport of Air Pollutants Working Group. Dr. Keating is also responsible for facilitating OAR cooperation with the EPA's Global Change Research Program and the interagency Climate Change Science Program. In this role, he has led an effort to restructure EPA's UV monitoring and research program.

#### 10 SELECTED INTERNATIONAL REPORTS

- 11 Ko, M.K.W., E.A. Jadin, D. Kley, and S. Wofsy [1992] "Predicted Aircraft Effects on Stratospheric  
12 Ozone" in *Scientific Assessment of Ozone Depletion: 1991*, World Meteorological Organization  
13 Global Ozone Research and Monitoring Project, report No. 25. Geneva, Switzerland.
- 14 Albritton, D.L., et al. (1992) *Methyl Bromide and the Ozone Layer: A Summary of Current*  
15 *Understanding*. Report to the United Nations Environment Programme on behalf of the  
16 Contracting Parties to the Montreal Protocol.
- 17 Ko, M.K.W., et al. (1995), "Model Simulation of Stratospheric Ozone" in *Scientific Assessment of Ozone*  
18 *Depletion: 1994*, World Meteorological Organization Global Ozone Research and Monitoring  
19 Project, report No. 37. Geneva, Switzerland.
- 20 Isaksen, I., et al. (1999), "Modeling the Chemical Composition of the Future Atmosphere," in *IPCC*  
21 *Special Report on Aviation and the Global Atmosphere*
- 22 Prinn, R.G. and R. Zander et al. (1999), "Long-lived Ozone-related Compounds" in *Scientific Assessment*  
23 *of Ozone Depletion: 1998*, World Meteorological Organization Global Ozone Research and  
24 Monitoring Project, report No. 44. Geneva, Switzerland.
- 25 Ko, M.K.W. and G. Poulet et al. (2002) "Very Short-lived Halogen and Sulfur Substances" in *Scientific*  
26 *Assessment of Ozone Depletion: 2002*. World Meteorological Organization Global Ozone  
27 Research and Monitoring Project, report No. 47. Geneva, Switzerland.  
28

#### 29 **PROFESSIONAL MEMBERSHIPS**

30 Member of American Geophysical Union; Member of American Meteorological Society

1  
2  
3 **Michael J. KURYLO**  
4 NASA Headquarters  
5 Science Mission Directorate  
6 Earth Science Division  
7 Washington, DC 20546  
8 Tel: (202) 358-0237; Fax: (202) 358-2770

9 **Education:**

- 10 1966 B.S. (Chemistry) - Boston College, *magna cum lauda*  
11 1969 Ph.D. (Physical Chemistry) - The Catholic University of America  
12

13 **Professional Experience:**

- 14 1969 - 1971 National Research Council / National Bureau of Standards (NBS)  
15 Postdoctoral Research Associate  
16 1971 - 2003 Research Chemist, Physical and Chemical Properties Division,  
17 Chemical Science and Technology Laboratory, National Institute of Standards and  
18 Technology (NIST - formerly NBS);  
19 1987 - 2003 Inter-Agency detail from NIST to the National Aeronautics and Space  
20 Administration as Manager of NASA's Congressionally-mandated Upper  
21 Atmosphere Research Program;  
22 2004 - present Program Manager / Program Scientist for Atmospheric Composition in the Earth  
23 Science Division of NASA's Science Mission Directorate.  
24

25 **Research Interests:**

26 Gas Phase Kinetics and Photochemistry, Atmospheric Chemistry, Environmental  
27 Chemistry, Stratospheric Ozone Depletion, Climate Change Research  
28

29 **Professional Memberships:**

30 American Chemical Society; American Geophysical Union; American Physical Society; Sigma Xi, The  
31 Scientific Research Society  
32

33 **Selected Honors and Awards:**

- 34 U.S. Dept. of Commerce Bronze Medal, 1983  
35 U.S. Dept. of Commerce Silver Medal 1991  
36 NASA Exceptional Service Medal 1996  
37 Catholic University of America Alumni Achievement Award in the Field of Science 1996  
38 United Nations Environment Programme Certificate of Recognition 1995, 1999  
39 National Oceanic and Atmospheric Administration Environmental Hero Award 2000  
40 NASA Ames Research Center Honor Award 2004  
41

NOAA/ESRL/Global Monitoring Division  
325 Broadway  
Boulder, CO 80305  
Tel: (303) 497-6657; Fax: (303) 497-6290

**EDUCATION**

1988 Ph.D. Analytical Chemistry, University of Colorado  
1983 B.Sc. Chemistry, summa cum laude, St. Lawrence University

**EMPLOYMENT HISTORY**

National Oceanic and Atmospheric Administration  
Research Chemist, Global Monitoring Division 1991-Present  
Post-Doctoral Fellow, National Research Council/NOAA 1989-1991

**RESEARCH INTERESTS**

Trace gases in the atmosphere, stratospheric ozone depletion, atmospheric chemistry, atmospheric oxidation processes, exchange of gases between the ocean or terrestrial ecosystems and the atmosphere, hazardous air pollutants.

**SELECTED RECENT AWARDS**

NOAA Research Employee of the Year 2000  
US Department of Commerce Silver Medal Award 1997  
NOAA Outstanding Scientific Paper of the Year Awards 1996, 1997, 1999, 2000, 2001

**SELECTED PUBLICATIONS (related to the S&A product's topic)**

1. When will the Antarctic ozone hole recover? P.A. Newman, E.R. Nash, S.R. Kawa, **S.A. Montzka**, S.M. Schauffler, *Geophys. Res. Lett.*, in press, 2006.
2. Urban/Industrial pollution for the New York City—Washington, D. C. corridor, 1996-1998: A study of the efficacy of the Montreal Protocol and other regulatory measures, D.H. Barnes, S.C. 35  
36  
37  
38

1  
2  
3 **Venkatachalam RAMASWAMY**  
4 NOAA/ Geophysical Fluid Dynamics Laboratory  
5 Princeton University, Princeton, NJ 08542.  
6 Tel: 609-452-6510; Fax: 609-987-5063

7 **EDUCATION**

8 1982 Ph.D. (Atmospheric Science), State University of New York at Albany, NY  
9 1977 M.Sc. (Physics), University of Delhi (India)  
10 1975 B. Sc. (Honours) Physics, University of Delhi (India)

11 **EMPLOYMENT HISTORY**

12 1985-1995 Research Scientist/ Scholar, Princeton University, and NOAA/ GFDL  
13 1995- Physical Scientist, NOAA/ GFDL, and Lecturer with rank of Professor, Atmospheric and  
14 Oceanic Sciences Program, Princeton University  
15 2000- NOAA/ GFDL Senior Scientist and Leader (Atmos. Physics and Chemistry Group).

16  
17 **RESEARCH INTERESTS**

18 Atmospheric radiative processes. Radiative forcing of climate due to natural and anthropogenic agents,  
19 including long-lived greenhouse gases, ozone and aerosols. Cloud-climate interactions. Modeling of the  
20 global climate system and climate response to radiative forcings. Modeling of: stratosphere-troposphere  
21 interactions; ozone-climate linkages; stratospheric temperature changes. Diagnostic analyses of climate  
22 change using satellite and other observations and coupled atmosphere-ocean models.

23  
24 **AWARDS**

25 American Meteorological Society, Henry G. Houghton Award - 1994.  
26 WMO Norbert Gerbier-MUMM International Award – 1998, 2003.  
27 Department of Commerce Gold Medal – 2002; Silver Medal – 2005.  
28 Presidential Rank Award for Meritorious Senior Professional – 2005.  
29 Fellow, American Meteorological Society – 2005.

30  
31 **COMMITTEES and PANELS**

32 Coordinating Lead Author, Intergovernmental Panel on Climate Change (2001, 2007).  
33 Lead Author/Co-author/Contributor, WMO-UNEP Scientific Assessment of Ozone Depletion (1999,  
34 2002).  
35 Coordinating Lead Author, Climate Change Science Program S&A Report 1.1 (“Temperature Trends in  
36 the Lower Atmosphere”) (2006).  
37 Vice-Chair, Joint Scientific Committee, World Climate Research Program (WCRP) (2006- ).

**Kenneth W. VICK**

US Department of Agriculture/ Agricultural Research Service (ARS)  
5601 Sunnyside Avenue  
Beltsville, Maryland 20705  
301-504-5321

**EDUCATION:**

BS, Biology/Chemistry, 1964, Oakland City University, Oakland City Indiana  
MS, Zoology, 1967, Oklahoma State University, Stillwater, Oklahoma  
PhD, Entomology/Biochemistry, 1968, Oklahoma State University, Stillwater, Oklahoma

**EMPLOYMENT HISTORY:**

1968-1991, Research Entomologist, USDA/ARS, Gainesville, Florida  
1991-1998, National Program Leader, National Program Staff, ARS, Beltsville, MD  
1998-2006, Senior Nat. Prog. Leader, National Program Staff, ARS, Beltsville, MD

**RESEARCH INTERESTS:**

Leader of a research program for the Agricultural Research Service, the in-house research agency of the USDA. This program includes a \$17 million research effort of more than 40 scientists at some 20 locations across the country to develop alternatives for the ozone depleting fumigant, methyl bromide. Methyl bromide is an important tool in agriculture to fumigate soil prior to planting and to disinfest stored commodities and structures. This is the largest methyl bromide alternatives program in the world and has made significant contributions to the decline in use of methyl bromide in the United States and the world.

**AWARDS:**

1988, U.S. Department of Agriculture Superior Service Award  
1999, U.S. Department of Agriculture Superior Service Award  
2002, U.S. Environmental Protection Service Bronze Medal for Commendable Service

**PROFESSIONAL MEMBERSHIPS:**

Ken Vick is a founding member of the Methyl Bromide Technical Options Committee (MBTOC) of the Montreal Protocol. MBTOC provides policy-relevant guidance and recommendations concerning the technical and economic availability of methyl bromide alternatives to the Parties of the Montreal Protocol. The committee is comprised of 38 scientists, technical experts and economists from over 20 countries. MBTOC publishes three reports each year updating the Parties and public about progress in methyl bromide alternatives, and giving recommendations concerning the critical use nominations made by Parties each year. MBTOC also publishes guidance documents and other reports as requested by the Parties. Additionally, MBTOC publishes a major assessment report every 4 years assessing all controlled and quarantine and pre-shipment uses of MB and all alternatives for those uses.
